a plurality of sense amplifiers to sense data.

However, the prior arts did not teach the ferroelectric memory device, further comprising:

first and second voltage converters disposed at respective first and second opposite sides of each of the subarrays;

a plurality of global wordline pairs to route paired global wordline signals to the first and second voltage converters;

the first and second voltage converters for a given subarray configurable to drive respective first and second sets of the wordlines of the subarray with voltage levels determined by the paired global wordline signals of the plurality of global wordline pairs and a subarray enable signal; and

bitline multiplexer operatively configurable to coupled the bitlines of a select one of the plurality of subarrays to the sense amplifiers.
